### **OPERATION**

### Foreword

Thank you for your purchase of the TRELAWNY Professional use A22 Industrial Vacuum Cleaner.

This manual contains the necessary maintenance information for you to ensure proper operation and care for this machine.

### It is essential for you to read through this manual thoroughly.

In the unlikely event that you experience problems with your A22 Vacuum, please do not hesitate to contact your local Trelawny dealer or agent. We always welcome feedback and comments from our valued customers.

### **General Information**

Before operating, performing maintenance or repairing the A22 Industrial Vacuum Cleaner this manual must be read and understood by the operator, if in any doubt, ask your supervisor before using this equipment.

Local safety regulations must be followed at all times. Failure to follow these instructions could result in damage to the A22 Vacuum and/or personal injury.

Trelawny SPT Limited disclaims all responsibility for damage to persons or objects arising as a consequence of incorrect handling of the machine, failure to inspect the machine for damage or other faults that may influence the operation prior to starting work, or failure to follow the safety regulations listed or applicable to the job site.

This machine is primarily designed for the containment of nuisance dust and dust collection.

A HEPA filtered vacuum system is available, which will contain 99.97% (DOP) of all air borne dust when removing toxic or contaminated products.

It can be used both indoors and outside in dry weather only.

This machine is not water proof.

### Safety

The person in charge of safety shall be responsible for informing workers about the risks associated with vacuum cleaner operations.

Ensure training is given to operators in the correct use and maintenance of the vacuum in order to protect themselves and others from hazards.

Failure to observe basic safety regulations and precautions could cause accidents during the vacuum cleaners operation, maintenance or repair.

Trelawny shall under no circumstances be deemed liable for accidents or damage caused by use of the vacuum cleaner by personnel not properly trained or who use it in an improper manner.

The safety precautions and warning notices are indicated in this manual and on the product

Unless these hazard messages are heeded, the operator could become involved in accidents with serious consequences for him/herself and others.

Trelawny cannot foresee all possible circumstances capable of representing a potential hazard, therefore the warnings in this manual and on the product should not be deemed exhaustive.

### Only ever use original Trelawny spare parts

#### Trelawny declines all liability in the event of non-original spare parts being used.

In the event of tools, procedures or work methods used that are not explicitly recommended by Trelawny, ensure no hazards exist for the operators and others.

Further advice is available from our Technical Department.

The employer must inform and train the user according to the provisions of applicable local laws.

Before using the machine, prepare and train yourself by reading this manual carefully.

Use of the machine by untrained and unauthorised persons is forbidden.

**Do not** use the machine to vacuum toxic substances unless it has been equipped with the special filters required for the specific type of dust.

Such filters must be explicitly requested by you.

#### **IMPORTANT:**

**Do not** vacuum flammable materials or substances or which could cause explosions (fuels, solvents, etc.). To vacuum such materials, the machine must be built with anti-explosion motor and electric system and this must be requested by you explicitly.

Do not vacuum corrosive substances unless the machine is equipped with containers suitable for this purpose (Stainless-steel AISI 304).

Use of the machine without the supplied filters is not recommended.

If the machine is used to vacuum toxic/harmful substances, the container must be emptied and the filters cleaned using adequate **P**ersonal **P**rotection **E**quipment.

This machines motor casing contains electrical components which <u>must not</u> be dismantled by the user.

When using the machine, be aware of other people around you.

Use the machine cautiously on slopes and ramps. Do not change direction on gradients.

Make sure the parked machine remains stable by operating the braked wheel.

Do not open the vacuum container with the motor running.

### **OPERATION**

### **Pre-start check**

Check all bolts and screws for tightness. Ensure that all fittings are secure.

This specific vacuum cleaner model has been designed, built and protected for vacuuming dusts and solid materials only. SEE BELOW

To ensure the correct operation of the vacuum cleaner, this must be positioned protected against atmospheric agents (rain, hail, snow, fog, dusts in suspension, etc.) with an environmental running temperature between 5°C and 45°C and relative humidity not above 70%.

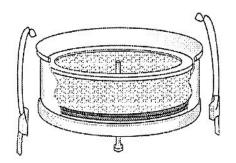

The work environment must be clean, well-enough lit and devoid of an explosive atmosphere.

The vacuum cleaner must not be used in environments containing substances in the form of liquids that could vaporise at room temperature and flammable dusts and gas.

All cables should be fully uncoiled and never left wrapped around cable reels or tied in loops.

#### **OPTIONAL FILTERS**

Besides the optional HEPA filter (303.5263), and depending on the dust to be vacuumed, the following filters and accessories are also available:

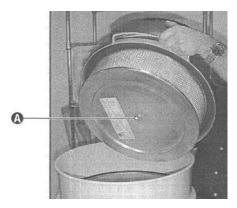

The HEPA filter permits the trapping of fine dust particles which have not been contained by the primary polyester filter.

If the vacuum cleaner features this specific filter, its filtering capacity will have to be periodically checked.

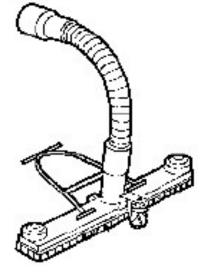

Complete HEPA Filter Kit. 303.5377

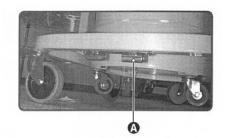

Antistatic filter For electrostatic dust. To change the filter, switch off the vacuum cleaner and remove the plug from the power socket, release and remove the upper cap and then loosen nut (A) in picture below.

Remove the absolute filter, seal it in a plastic bag and dispose of according to applicable local laws for the type of dust recovered.

#### FLOOR PICKUP ATTACHMENT

The bracket of the floor attachment must be secured to the vacuum cleaner frame by means of the special front mounting point (A).

Make sure the maintenance engineer has carefully read the instructions contained in this manual and knows how the vacuum cleaner works.

Before carrying out a maintenance job, the maintenance engineer must:

Disconnect the plug from the power socket.

Work done on motors or other electrical component parts must only be performed by a specifically trained electrician.

Always use tools that are in perfect condition and specifically made for the operation to be done. The use of unsuitable tools or tools not in good condition could cause serious damage.

### **Maintenance checks**

For efficient vacuum cleaner operation, a number of checks are best made periodically:

Check to see whether the filter is worn or has become too permeable.

Make sure the gaskets of the motor head base, the filter holder ring and of the container are sealing correctly.

The electrical parts (plugs, switches, cables, etc.) must not be faulty.

The screws and fastenings must always be secure.

Make sure the container is not overfull.

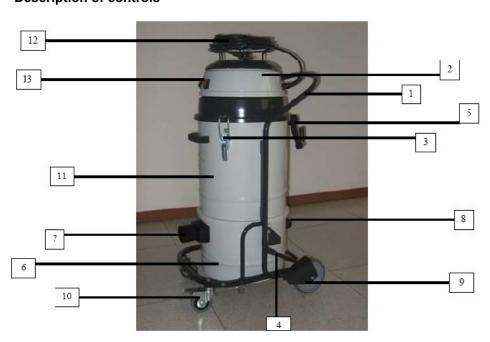

Check the integrity of the flexible vacuum hose and accessories.

If the flexible hose is perforated, the power of the cleaner will be reduced and dust may leak into the environment.

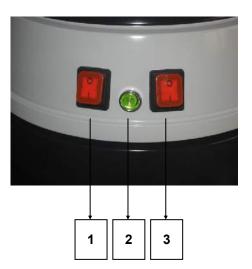

When contacting Trelawny SPT Ltd or their agents, always quote the details shown on the vacuum cleaner serial plate.

## **OPERATION**

#### Starting **Description of controls**

1) START/STOP switch motor 1 2) Green light POWER ON 3) START/STOP switch motor 2

#### 110v Motor

Take particular care when using 110v machines, ensure that the 230v electrical supply is earthed and that breakers and fuses are correct for the loading.

The 110v motor requires the minimum of a 16 amp transformer centre tap power supply.

To avoid voltage drop, always use the shortest possible length of extension cable.

Maximum length of cable 30 meters.

Fit the accessory required for the type of vacuuming operation on the opposite end of the hose.

Note: Standard accessories that are included with this vacuum system are a flexible hose, floor squeegee, floor brush, PVC lance, PVC brush, PVC connection, PVC extension, a double bend and a flexible hose connection.

All other accessories must be specified and ordered separately.

Fit the supplied connector on the pipe union.

Fit the supplied the pipe in connector.

Make sure the power supply corresponds to the voltage and frequency indicated on the vacuum cleaner plate.

IMPORTANT: Do not plug in the power socket with wet hands

In the event of an extension being used, make sure this is in perfect condition, in compliance with EC standards and with cable cross section suitable for the power input of the vacuum cleaner.

### Operation

Lock the front castor wheel (10). Grip one end of the flexible hose complete with selected accessory.

Press the START switch to the 'on' position. (1 and 3)

To stop the vacuum cleaner, move the switch to the 'off' position. (1 and 3)

#### Caution:

Before switching the vacuum cleaner back on, ensure the motors have come to a complete halt.

After finishing work, disconnect the vacuum cleaner from the power supply.

For greater convenience, the most frequently used accessories can be placed in the special accessory basket on top of the motor unit.

### **OPERATION & MAINTENANCE**

## Using the filter cleaning system.

If the vacuum cleaner becomes inefficient, the filter will have to be cleaned by means of the special reverse pulse flap on the front of the machine.

Block off the vacuum take off using the Plastic Cap provided (3). Start the motors and allow a vacuum to be produced, open the flap quickly and close the flap on the front of the vacuum several times, the inrush of air produces the reverse pulse action.

### **Dust containment bin**

This should be emptied when the vacuumed material has reached 3/4 of its maximum capacity.

## Releasing the dust containment bin.

Lift the handle in the bottom part of the cleaner to release and remove the container.

Stop the vacuum motors by pressing the relevant STOP switches and disconnect from the power socket.

While performing this operation it is best to wear a dust protection mask.

air produces the reverse pulse action.

If the orange light indicator is still on, repeat the filter cleaning process.

If after this second cleaning process the orange light is still on and the vacuum cleaner is still inefficient, replace all filters.

The filter cleaning system is best operated every time before use and after prolonged operation.

Once the cleaning process has finished, remove the Plastic Cap (3) from the suction inlet and connect the accessories to continue the vacuum process.

If the vacuum cleaner is still inefficient, replace all filters.

The filter cleaning system is best operated every time before use and after prolonged operation.

Lift the lever at the rear of the vacuum cleaner.

# Do not place hands on sides of container near the guide pins while re-installing.

Perform the container locking operation by means of the levers located on the side, USING BOTH HANDS !!

### **Maintenance**

This section describes the control and special maintenance operations crucial for keeping the vacuum cleaner in perfect working condition. In the case of major repairs, it is best to contact an authorised dealer,

### Replacing the filters To replace the filters, proceed as

To replace the filters, proceed as follows:

Turn off the vacuum cleaner by pressing the motor **STOP** switches. <u>Disconnect</u> the vacuum cleaner plug from the power socket.

Ensure front castor wheel is locked.

Release the two retainers that hold the motor head in place.

Slide the container out.

Empty the contents of the container into a special waste disposal container in accordance with laws applicable in the country where the vacuum cleaner is used.

#### NOTE:

When reinstalling the containment bin, never place hands between the material container and vacuum cleaner while locking.

Lift the motor head and rest this on a flat surface being careful not to damage the power cable.

Remove the Conical Cartridge Filter and replace as necessary.

Other filters are available which can give a long life than the standard filter.

## MAINTENANCE

Loosen the screws on the shaft's bar, remove the shaft and the filter's screws.

Remove the filter and loosen the shaft's bush.

**Important:** All material trapped and contained within the filter must be disposed of according to local legislation.

## FAULT FINDING

FAULT	CAUSE	ACTION
The cleaner fails to start.	No power.	Check the power mains supply. Check the integrity of the plug and power cable. Check transformer rest button.
	Indicator off and plug fitted, fuses burnt out.	Replace the fuses.
	Indicator on, plug fitted, switches working, worn motor brushes	Replace the brushes.
Dust is leaking out	Perforated vacuum pipe.	Replace the pipe.
	Perforated filter.	Replace the filter.
	Filter unsuitable for type of job.	Fit a suitable filter for the type of material to be vacuumed.
The vacuum cleaner does not work as it	Pipe perforated or blocked.	Check the pipe and, if necessary replace.
should.	Container full	Empty container.
	Filter blocked.	Replace filter.
	Seals worn.	Clean the filter and if necessary change it.
	Air leak.	Check for any air leaks out of closing fasteners, tightening screws, container or filter chamber.
If problem has not been o	cured by any of the above actions, contact you	ur local Trelawny SPT dealership for assistance.

### Machine storage

Remove the filter and clean it, empty the container and store the vacuum cleaner in a place protected against condensation and at a temperature between 0°C and 40°C.

Cover with a nylon sheet to prevent accumulation of dust.

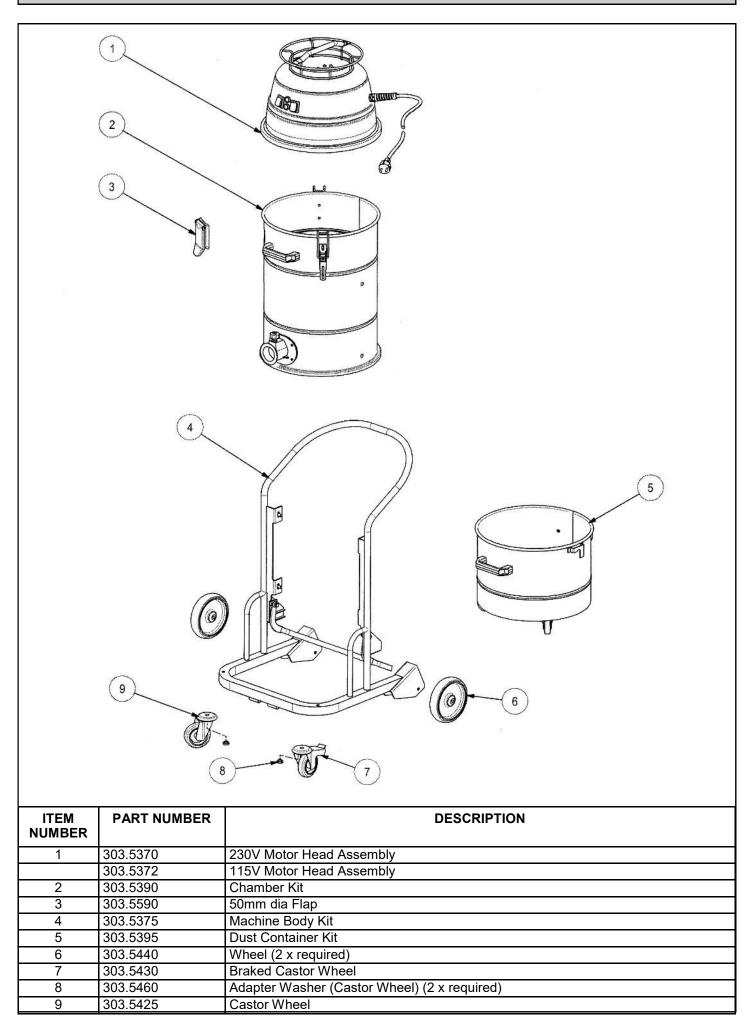

### Scrapping

In case of scrapping, all the component parts of the vacuum cleaner will have to be disposed of through suitable channels in accordance with applicable legislation.

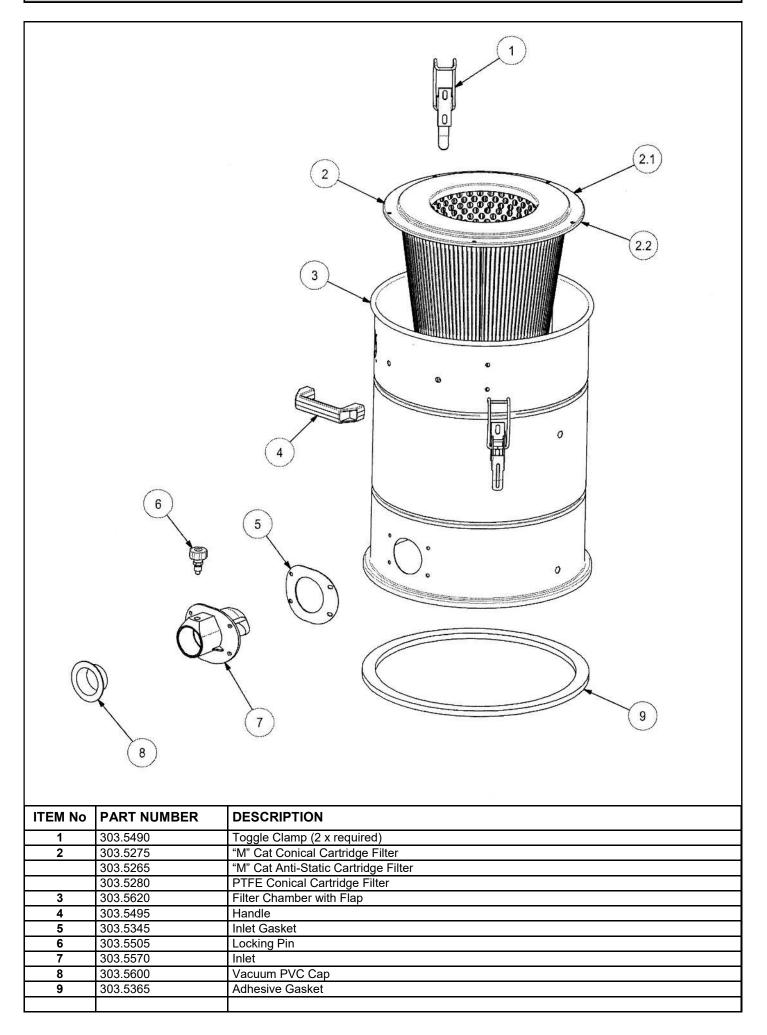

Before scrapping, all plastic and rubber parts will have to be separated from the electrical material.

Most parts made from plastic, aluminium, copper or steel are suitable for recycling.
